CAMPWARE
WORKFORCE ACCOMMODATION MANAGEMENT

SIMPLIFYING ACCOMMODATION
MANAGEMENT FOR REMOTE WORKFORCE LODGES

CampWare includes five modules, maximizing efficiencies for the lodge operator.

Accommodation · Housekeeping · Food Service · OPERATIONS · Registration · Invoicing

---

ACCOMMODATION

Quickly gain insight into capacity, check-ins, check outs, off market rooms and maintenance rooms. CampWare gives you instant oversight of every dorm with the click of a button.

FOOD SERVICE

Supports daily meal service, food service schedule creation and reporting to assist with traffic metrics and invoicing.

HOUSEKEEPING

Head Housekeepers can automatically and instantly assign cleaning tasks across housekeepers using our algorithm.

Housekeepers can then use a mobile device and CampWare's Mobile Housekeeping module to access and check off completed room assignments, automatically notifying the front desk that the room is either back on market and ready for a guest, or if there are potential issues to resolve.

REGISTRATION

Supports an unlimited number of new or returning guests.

Reservations can be made using gender, shift type, room class, billing entity or any other metric you require. Rooms can also be reserved against allotments as far in advance as you require.

INVOICING

CampWare allows for customizable billing configuration to handle complex invoicing requirements.

Gemstone has taken 15 years of existence and client feedback and created a web application of our industry leading accommodation management solution, CampWare. You can now access CampWare from any device with a browser and Internet connectivity.
